PHASE II OF DOBBINS STREET/ EAST MONTE VISTA AVENUE INTERSECTION IMPROVEMENTS PROJECT TO BEGIN

Phase II of the Ulatis Creek Bridge widening and intersection improvements are set to begin on October 27. During this second phase, the contractor will be modifying the temporary delineation and K-Rail. The number of traffic lanes on Monte Vista Avenue at the Ulatis Creek Bridge will still be two lanes (one in each direction) and the signal system will still restrict left turns onto Dobbins Street from East Monte Vista Avenue.

Traffic will be directed to the new outside lanes of the bridge. This will allow the contractor to construct the bridge approach slabs in the middle of the road. This phase of the project is expected to last approximately 2½ weeks.

The third and final phase of the project will start immediately after completion of Phase II and is expected to be substantially complete at the end of November weather pending. During Phase III, the contractor will grind the existing road, clean and treat the existing bridge deck, adjust manhole covers, install signal detector loops, place the final lift of asphalt concrete throughout the entire project limits, and install permanent striping. Traffic delays are possible in Phase III as the contractor will be directing traffic with the use of cones and flagmen during the work shift. Traffic control during non-working hours will have four lanes of traffic (two in each direction). Upon completion of the final striping, traffic will be allowed to turn left onto Dobbins Street from East Monte Vista Avenue.
